

Run Parallel pipeline at once

Step1 : For parallelism, need to go to first organization setting on the left. Parallelism concept is available at organization level or company level.

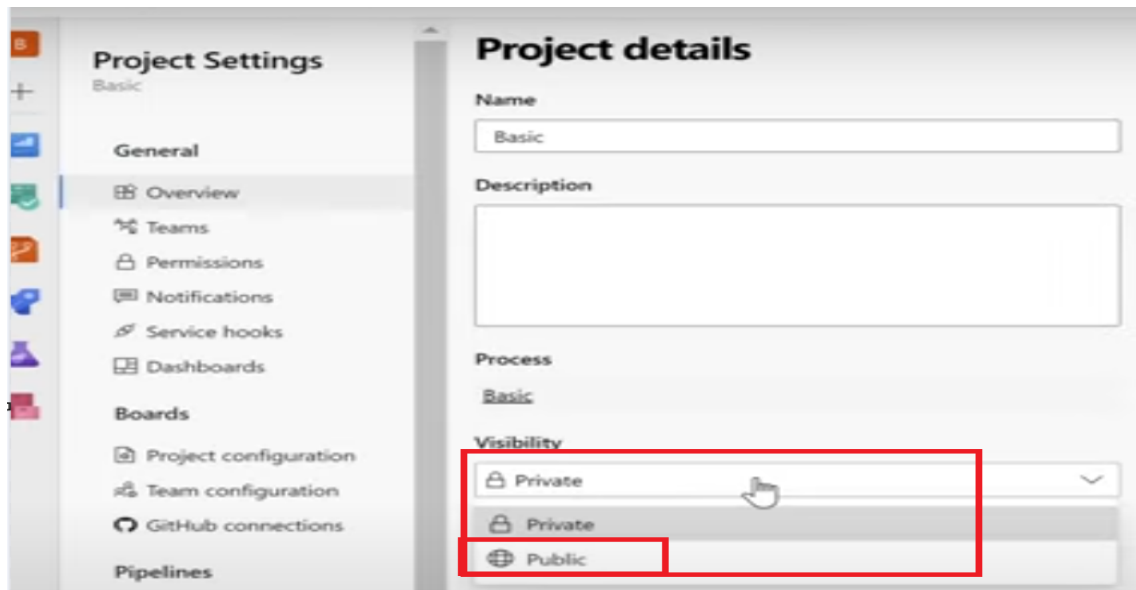

Imp Note :

1. For private project only one pipeline can run at one time for Microsoft-hosted and self-hosted.
2. For Public Project we can run 10 parallel pipeline at same time for Microsoft-hosted and for self-hosted we can run Unlimited parallel pipeline.

Step2 : If we want to achieve parallelism, then need to change private address to public address of any project and then check.

Select Project → Project Setting → Change visibility from private to public in Project details → then save it

Step3 : Now we can run multiple pipeline in public project.

Description	Stages
#49 • Set up CI with Azure Pipelines Manually triggered for master 57c747b4	
#48 • Set up CI with Azure Pipelines Manually triggered for master 57c747b4	
#47 • Set up CI with Azure Pipelines Manually triggered for master 57c747b4	
#46 • Set up CI with Azure Pipelines Manually triggered for master 57c747b4	
#45 • Set up CI with Azure Pipelines Manually triggered for master 57c747b4	
#44 • Set up CI with Azure Pipelines Manually triggered for master 57c747b4	
#43 • Set up CI with Azure Pipelines Manually triggered for master 57c747b4	
#42 • Set up CI with Azure Pipelines Manually triggered for master 57c747b4
